

COURSE TITLE:

VENEPUNCTURE

MODULE	MODULE NAME	OBJECTIVE
1	Introduction to Venepuncture	To understand what venepuncture is, why blood samples are collected, and why patient consent is important.
2	Blood Circulatory System	To learn about the heart, blood vessels, and how the circulatory system moves blood around the body.
3	Anatomy and Physiology	To understand the structure of blood vessels, including arteries, veins, and the vessels that support venepuncture.
4	Site Selection for Venepuncture	To understand how to assess veins and select a safe, suitable puncture site for blood collection.
5	Common Veins Used in Venepuncture	To learn about the main veins used in venepuncture and understand which veins are preferred or avoided.
6	Venepuncture Equipment	To identify the equipment used for venepuncture and understand the purpose of each item during the procedure.
7	Venepuncture Procedure	To understand the main steps of the venepuncture procedure, from preparation to sample collection.
8	Infection Control	To understand infection control measures used during venepuncture, including hand hygiene, PPE, and safe waste disposal.
